

Budget Forecasting: Virtual Instructor-Led Training Event

September 2023

12th-13th [Session 1 at capacity]

19th-20th [Session 2 registration open]

Course Description:

Running a successful budget forecast in VUEWorks take a good bit of setup and know-how. In fact, there are a number of prerequisites that must be in place before a budget scenario can be created. This course is designed to help identify all of the data and configuration that must be in place before a forecast can be created (Day 1), as well as understanding how to both create a successful budget scenario and properly read its results (Day 2). By the end of the course, users should be able to begin pulling together all necessary data and configuring the software to support Budget Forecasting, as well as run a successful Budget Forecasting scenario.

Seating to this virtual event is limited – Scan the QR Code above to register for just **\$299**.
